

## Aviation industry

Client application  
Planilog, France

Planilog provides a powerful low cost expert system for Maintenance/MRO projects for heavy certified maintenance as well as standard maintenance scheduling (interactive or automatic) for all types of aircraft.

VARCHART XGantt's many features are used to manage these projects. Layers are used to provide vital information: types of maintenance, aircraft information, status, maintenance duration, scheduled resource allocation and many other data fields. Histograms provide available resources, resource forecasts and export functions for reporting software.
